

SecureSDLC: Building Security into the Software Lifecycle

[SecureSDLC: Building Security into the Software Lifecycle.](#)¹

June 17th, Silicon Valley

This program is for those involved with the planning, development, design, coding and deploying of applications. Presenters will address the need for secure software, what should be considered in securing each phase of the software lifecycle, and how organizations can create their own software assurance program. Additionally, there will be a look at the regulatory landscape and what professionals need to be aware of concerning this.
